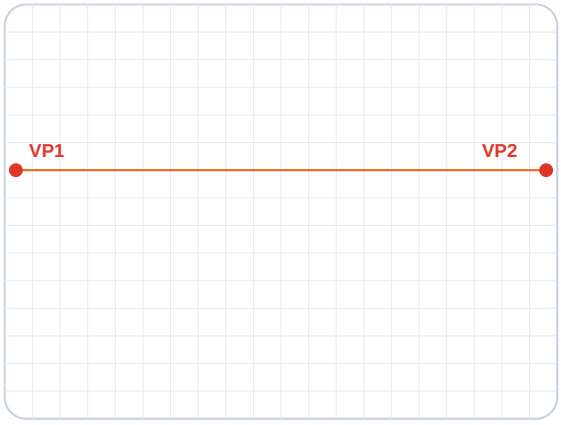
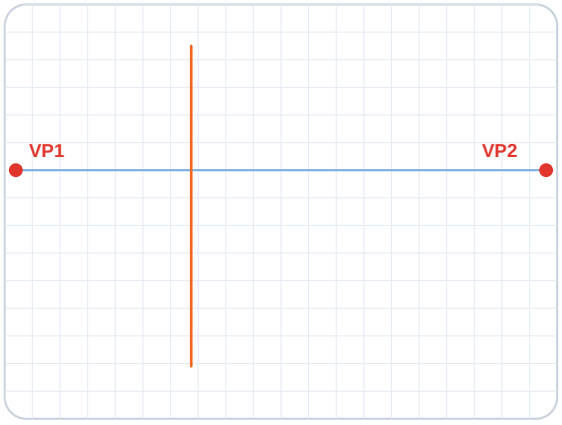
Glass tower with even columns

Follow the steps. Orange = the line you draw in that step. Blue = light guide lines.



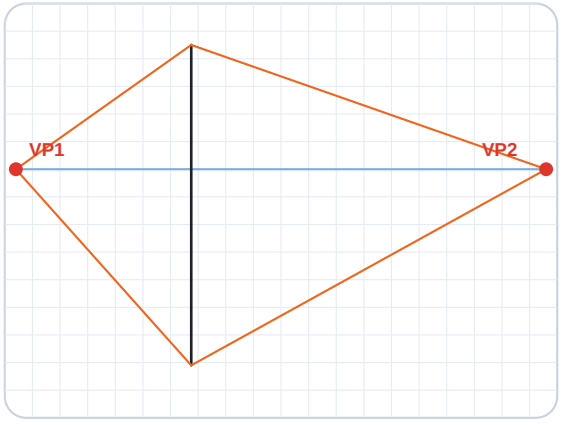
STEP 1 **Eye level in the middle**

Draw the horizon across the middle of the page and put VP1 and VP2 near the ends.



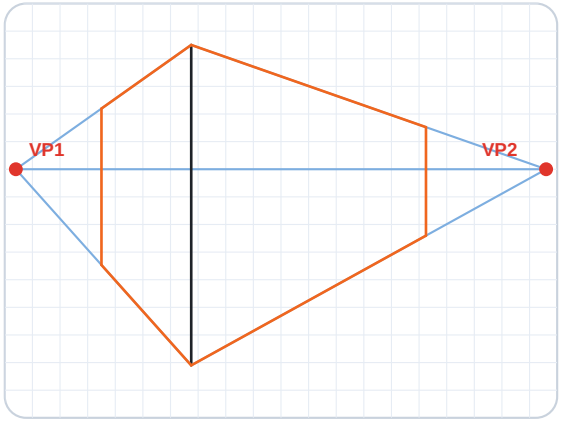
STEP 2 **The front corner**

Draw a tall vertical line that crosses the horizon. Part of the building is above your eyes, part is below.



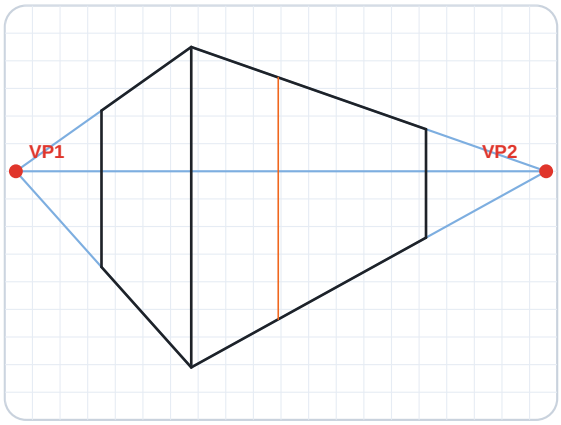
STEP 3 **Lines to both VPs**

Put your ruler on VP1 and draw light lines to the top and the bottom of the corner. Do the same from VP2.



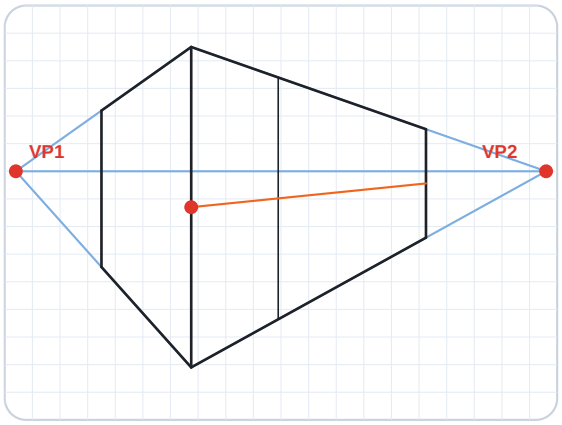
STEP 4 **Close the walls**

Draw a vertical line on the left for the short wall and one on the right for the long wall. Then ink the top and bottom edges of both walls.



STEP 5 **The first column**

Draw one vertical line on the long wall. The space between it and the corner is the first column of windows.

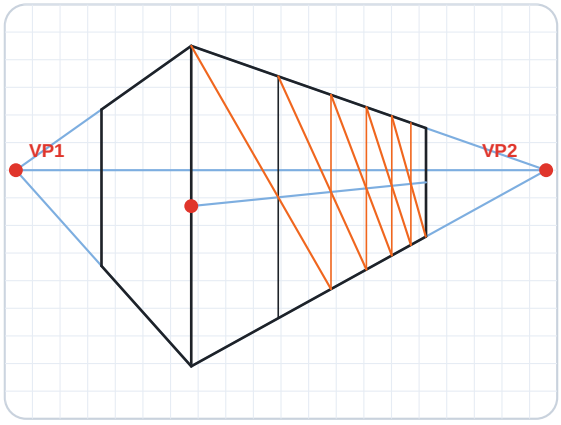


STEP 6 **The middle line**

Mark the middle of the front corner and draw a guide line from it to VP2. It cuts every column line in half.

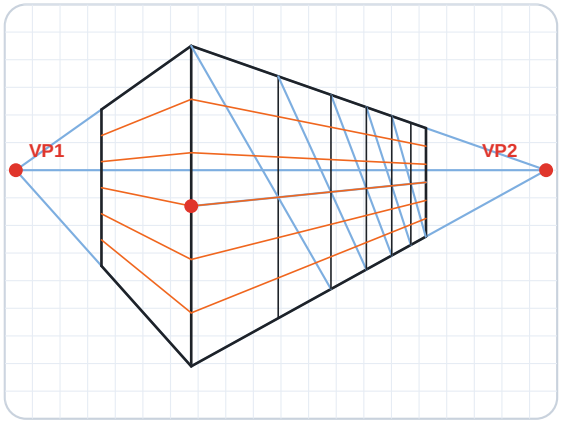
Glass tower with even columns

Follow the steps. Orange = the line you draw in that step. Blue = light guide lines.



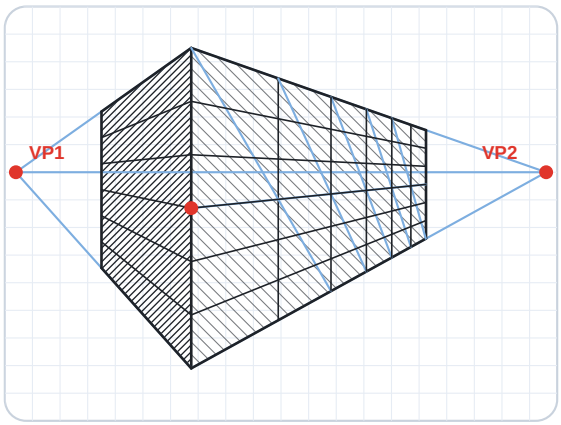
STEP 7 **Measure the columns**

From the top of the corner, draw a diagonal through the middle of the first column line, down to the bottom edge. Put the next column line there, and keep going to the end of the wall.



STEP 8 **Divide the floors**

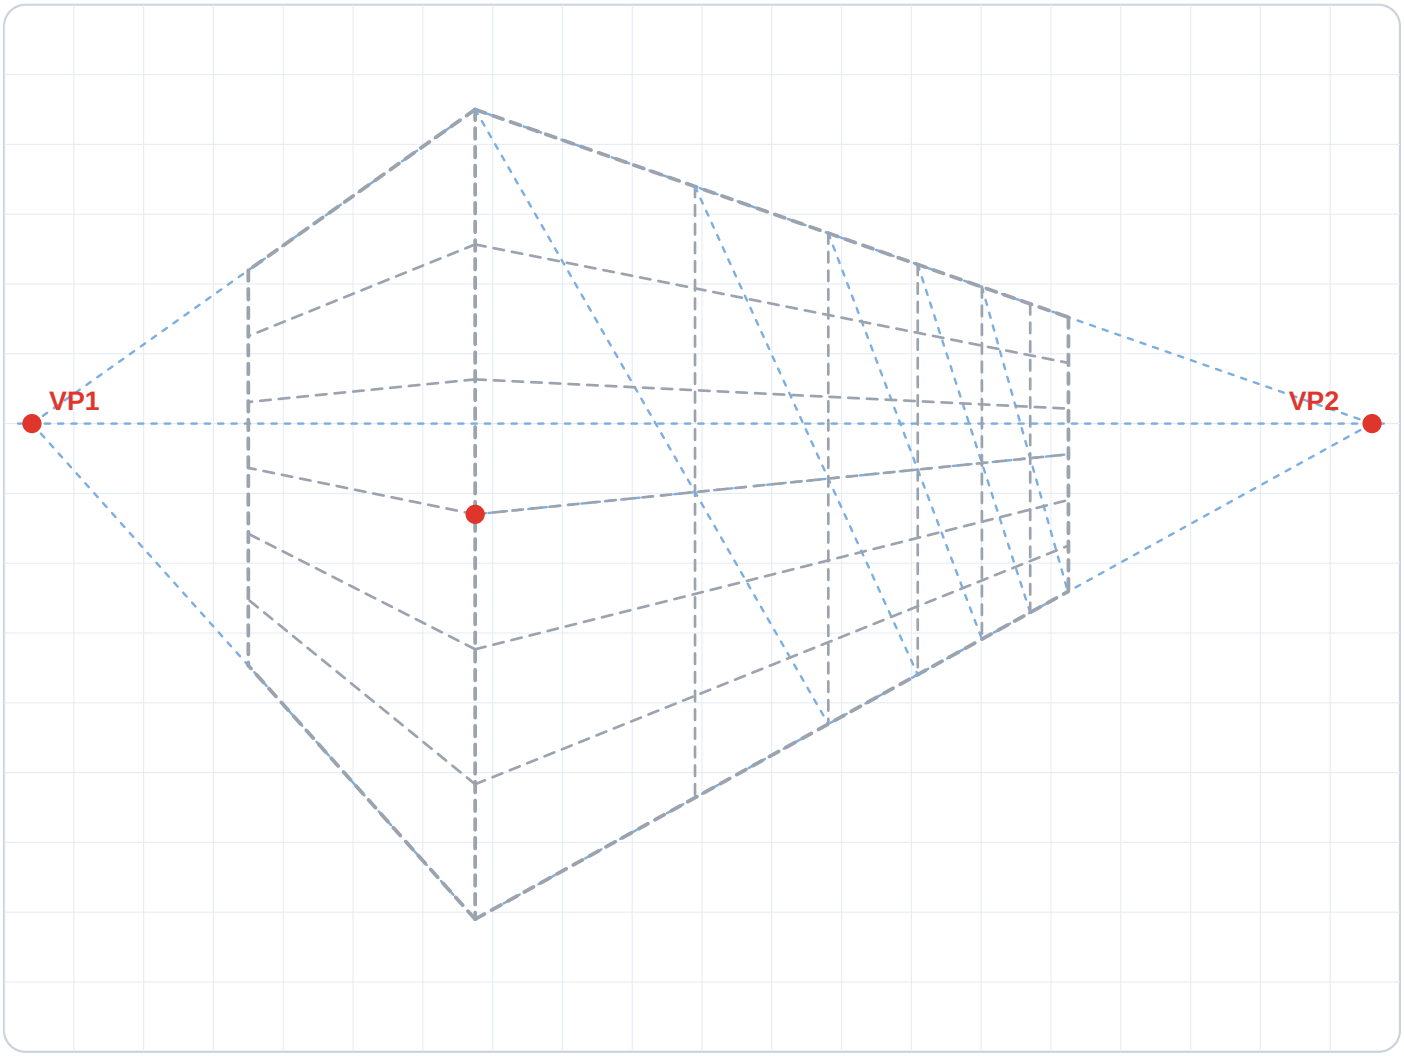
Divide the front corner into equal floors with a ruler. Send each mark to both VPs.



STEP 9 **Shade and finish**

Shade the short wall and give the glass a light tone. Your glass tower is done.

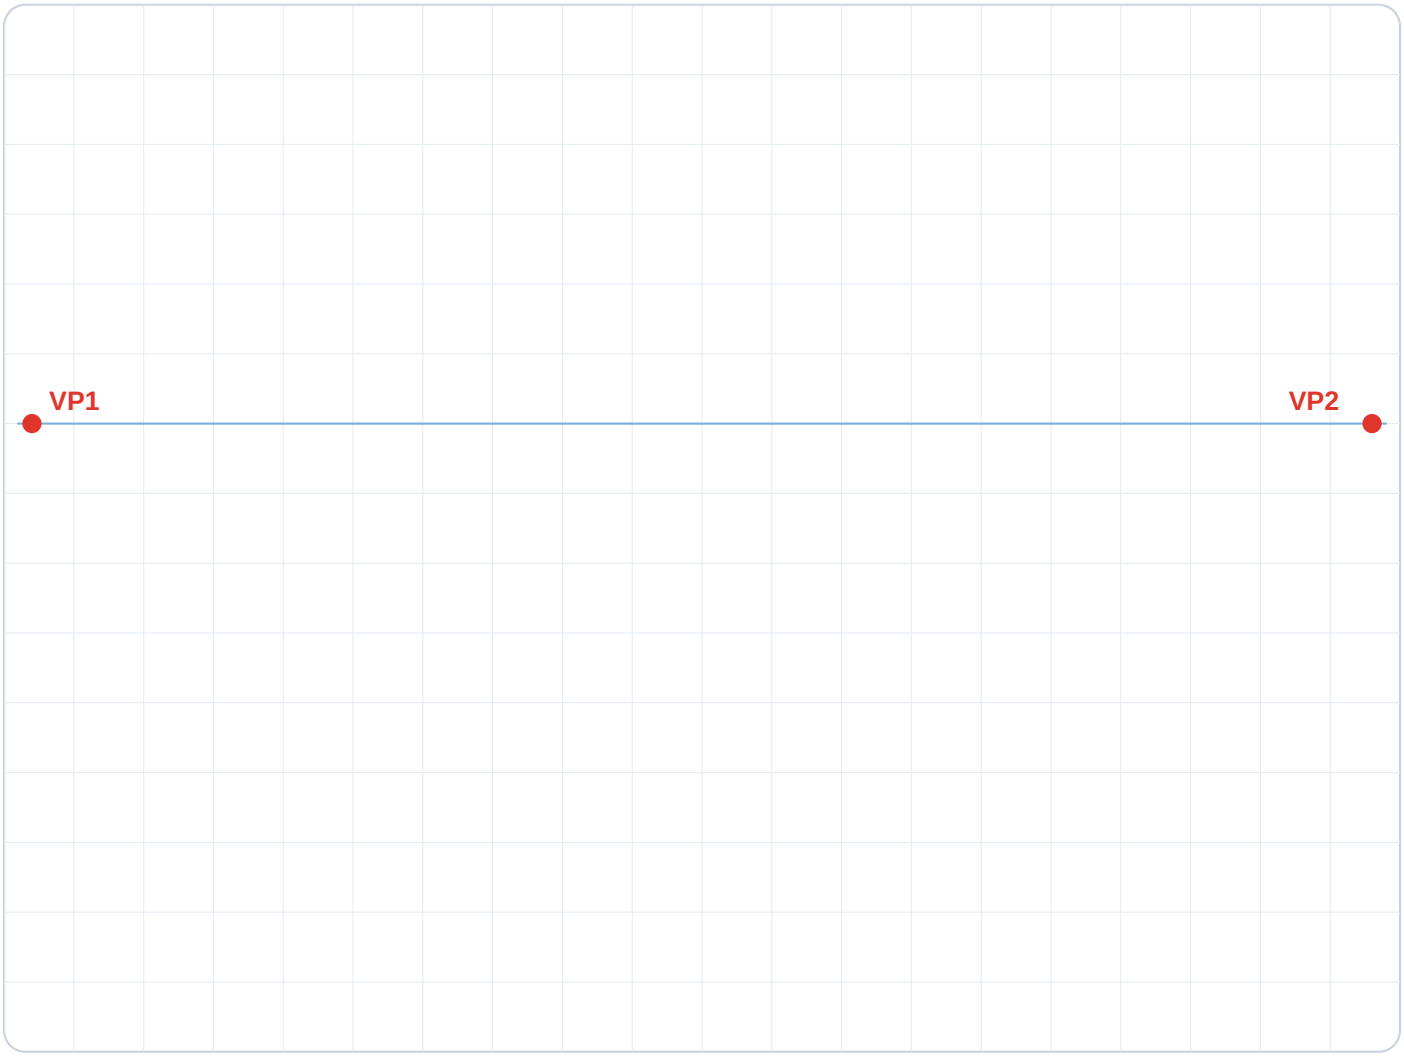
Glass tower with even columns



How to use this page

1. Trace the blue dotted guide lines very lightly.
2. Go over the grey dashed lines firmly. Use a ruler.
3. Shade the dark side last. Then try it on the next page without help.

Glass tower with even columns



Now draw it on your own

The horizon and vanishing point are already here. Build the drawing from step 2.
